The Colorado State Forest Service tree program enables farmers, ranchers, and landowners to obtain trees at nominal cost. The program’s aim is to encourage landowners to plant trees and shrubs to be grown for conservation benefits. Ornamental qualities such as color and degree of fruit production are not guaranteed.

**Conditions of Sale:**
1. Nursery stock is to be used for conservation purposes only.
2. Payment must accompany order: no trees will be reserved until payment has been received.
3. Trees are living organisms that require care: there can be no guarantee of survival.
4. All orders are final: no cancellation or refunds.
5. In the event that trees ordered are unavailable, a refund may be offered unless a substitute species can be arranged.

Visit our webpage for an up-to-date inventory (see above web address) or call (719) 687-2951.

**Erosion Control Techniques**
- Use one (~74lb.) bail per plot
- Log erosion barrier or contour log terrace orientation. Place logs perpendicular to the flow of water.
- Spread the straw evenly over the soil

**Proper Watering Methods**
- Water low and slow around the dripline or root zone of the seedling (~1 – 1.5 gal.) 1 times per week from April to mid October to ensure healthy root growth.

**Seedling Tree or Shrub Survival Tips**
- Proper Watering Methods
  - Water low and slow around the dripline or root zone of the seedling (~1 – 1.5 gal.) 1 times per week from April to mid October to ensure healthy root growth.

**Interested in learning more? Check out our pages!**
Polymer is beneficial when used as a root-dip for bare root stock during the planting process. It also significantly increases first year survival when mixed with the back-fill soil at the rate of approximately one cup of the hydrated polymer per tree or shrub. When hydrated, a **1/4 pound bag will service 80-100 trees**.

**Fertilizer Tablets (20 – 10 – 5, 10 grams)**

The fertilizer tablets are slow release tablets that should last up to three years depending moisture content. Each seedling needs one tablet at planting time.

**Tree Guards**

Tree guards are photodegradable plastic mesh tubes (4in. X 18 in.). They help protect seedlings from deer and various surface rodents. Two 36” bamboo stakes are recommended to hold each guard in place.

**Shingles/Shades for Shade & Wind Protection**

Conifers planted on exposed sites are extremely susceptible to sun-scald and moisture loss especially on dry, windy days. Shingles and shades reduce this stress. It takes approximately two bundles of shingles or 30 bundle of shades to shade one box (30 trees). They should be placed on the north, west, and south sides of each seedling.

**Weed Barriers**

This product is a woven polypropylene fabric which acts as artificial mulch to reduce soil moisture loss. It is porous, thus allowing water and snow to seep through the material. Weed barrier also eliminates weed and grass competition that can “choke out” seedlings.

**Tentative Pickup Dates** –Late April for Woodland Park and early May for all other locations. Notification will be sent with exact dates and times to everyone who places an order via email. Pickup will be at the Cañon City, La Veta, Trinidad, Westcliffe, Woodland Park locations depending on what county you live in.

Assistance for seedling selections and site planning specific to your property is available directly from Colorado State Forest Service personnel. Planting trees and shrubs in the Region takes special care. Survival accessories (tree guards, fertilizer, synthetic polymer, shingles and weed barrier) that can greatly increase survival rates are available.

If you are not familiar with our trees and shrubs or have never planted in Colorado, visit our website and download our full-color buyers guide (see web at top of first page).
