

Watering Recommendations

- ☁️ Tree root systems can spread 2-3 times wider than the height of the tree. Most of the tree's absorbing roots are in the top 12 inches of soil. As your tree grows larger, so does the tree's watering zone.
- ☁️ The following recommendations assume the shrubs and trees are mulched (fabric or organic) to retain moisture:
- ☁️ First Growing Season:
 - 4-6 gallons per week
- ☁️ Once Established:
 - 2 gallons per week
- ☁️ In Dry Winters:
 - All shrubs will benefit from winter watering from October through March
